

Beck Piscopo

Applied AI Engineer

beckpiscopo.xyz
x: [@beckpiscopo](https://twitter.com/beckpiscopo)
📍 St. Petersburg, FL

I build full-stack research intelligence platforms that help people make sense of complex domains. Experienced in data engineering and analysis, I design systems that combine data pipelines, AI-powered reasoning, and intuitive frontends that make fragmented or dense information navigable. I am driven to surface unobvious yet meaningful connections.

Work Experience

Career Break | Independent Building

Caribbean & USA, 2023-2026

- Stepped away from full-time work to be present for my son's first years. During that time, my family lived aboard and sailed the Caribbean.
- **Noeron:** Built a knowledge layer for podcasts. This platform detects scientific claims made in the podcast, then validates those claims by examining the academic literature.
- **Critical Minerals Intelligence:** Designed a geopolitical analysis platform with interactive mapping, automated news monitoring, and HHI-based supply chain risk scoring

Data Analyst | BI Engineer

First Orion, 2019-2023

- Analyzed billions of call records to detect fraud patterns and anomalies within the T-Mobile network using Spark on Databricks
- Technical account manager for a \$4M+ annual revenue solution across engineering, analysts, and executives
- Led development of a custom sentiment analysis algorithm that outperformed the existing vendor solution by 30%
- Designed and implemented a fully automated KPI/SLA reporting pipeline for the CNAM platform
- Led cross-organizational stakeholder meetings with C-suite participation for both First Orion and T-Mobile
- Proposed and drove adoption for an internal BI platform to increase data access and reduce time-to-insight for analysts, sales engineers, and customer support teams

Jr. Developer | Assoc. Project Manager

Team SI, 2019-2019

- Built an Azure DevOps–Google Chat integration in JavaScript (Azure Functions, ngrok) while supporting client web projects from requirements through delivery.

Skills

Agentic Engineering

Multi-agent orchestration (*LangGraph*) · MCP server design (*FastMCP*) · RAG & retrieval architecture · agentic tool design · LLM evaluation & observability (*Langfuse*) · vector search & embeddings

Analytics & Modeling

Anomaly detection at scale · risk & composite scoring · financial modeling · statistical analysis

Data & Pipelines

Analytics engineering (*dbt, DuckDB*) · dimensional data modeling & data marts · multi-source ingestion & ETL · data testing & quality · vector stores (*pgvector, ChromaDB*) · entity/identity resolution

Infrastructure & Delivery

FastAPI, Docker · Railway · full-stack delivery (*Next.js / React*) · CI/deployment

Languages

Python · Typescript · SQL · JavaScript · Scala

Education

BS, Information Science

University of Arkansas at Little Rock

Aug 2014 - Dec 2018
